AI-Assisted Knee X-Ray Assessment & Explainable Clinical Decision Support

Study Label	Knee X-Ray Study	Patient Label	Demo Patient
Generated	2026-09-13 23:40	Prototype Version	Hackathon MVP

Source Image And Explainability Overlay

Overlay is illustrative and demonstrates the UI workflow; it is not a validated anatomical segmentation.

Prototype Assessment Summary

Metric	Result	Interpretation
Image Quality	62/100	Review
Joint-Space Proxy	98/100	Relative index only
OA / KL Proxy	55/100	KL 2–3 (Prototype Estimate)
Alignment	Alignment Review	Prototype image-statistics signal
Fracture Screen	No Strong Signal	76% prototype confidence

Explainable Findings

- Image Quality:** Review — quality score 62/100.
- Anatomical Region:** Central knee-region ROI highlighted for prototype analysis.
- Joint-Space Proxy:** Relative index 98/100; not a calibrated millimetre measurement.
- OA / KL Proxy:** KL 2–3 (Prototype Estimate); prototype risk score 55/100.
- Alignment:** Alignment Review — image-statistics proxy only.
- Fracture Screen:** No Strong Signal (76% prototype confidence).

Recommended Review Workflow

1. Confirm image quality and correct view. 2. Review the highlighted anatomical region and landmarks. 3. Review the relative joint-space and alignment signals. 4. Review the OA/KL prototype output and fracture screening signal. 5. Correlate with the original image, clinical history, and qualified professional interpretation.

Important: This is a research/hackathon prototype and is NOT a medical diagnosis system. The metrics, segmentation, KL estimate, alignment signal, and fracture screen are illustrative prototype outputs and have not been clinically validated. Do not use this report as a substitute for qualified medical assessment.
